## **What iPhone 3G is all About Mobile Technology at Its Finest**

Ever since the first generation of iPhones hit the market, the world was in a frantic to obtain one. With its sleek design and great technology inside, you too would definitely want to own one. The iPhone is one great device that combines a mobile phone, a multimedia player, and a web browser in one neat package. In fact, the iPhone can even do more than those things as it will be able to give you high quality entertainment that you never imagined possible in a mobile phone.

Today, the iPhone 3G has been unveiled and is now very popular among a lot of people. It has its own distinctive look and design, and it also has a radiant touch screen interface that you would definitely want in your iPhone.

The iPhone 3G is a buttonless phone that looks beautiful and desirable. However, one question remains, which is: does it really deliver what it promises?

The answer to this is yes. The iPhone 3G will be able to provide you with all the things you need in a mobile phone. In fact, it can even offer you more than just a tool to communicate with family and friends.

Basically, the iPhone 3G stands for 3rd generation. This particular iPhone version is able to offer a lot of flexibility to the user and will also allow you to

be constantly online in order to exchange information with family and friends.

iPhone 3G will even allow you to watch a movie and even let you play with online games.

The multi touch screen of the iPhone 3G will allow you to control the display of the iPhone. For example, if you are viewing a photograph, you can zoom in and out by just moving your fingers inwards or outwards

The iPhone 3G also offers a 2 megapixel camera. With this kind of camera, you will be able to take high quality photos of just about anything you want. And, because you can connect to the internet with this mobile phone, you will be able to instantly send the photos you take to anyone you want. With iPhone, you will be able to capture and immortalize memories in style.

Another cool thing about the iPhone 3G is that you can purchase and download iPhone applications from the App Stores online. Whatever applications you want to use, you will be able to access it, purchase it, and download it right on the spot.

The iPhone 3G is also a multimedia player. Fill it with your favorite tunes and videos and you can be sure that you will be able to enjoy listening to your favorite music and watching your favorite videos while you are on the go. With iPhone, you will never get bored again. And, if you liked the music you heard on a radio, you can instantly search for it with your iPhone and

purchase your own copy of the music right directly in your iPhone 3G.

As you can see, there are so many things that you can do with the iPhone 3G. This is more than just a phone, but it is also an organizer, a gaming system, a multimedia player, and a personal computer all rolled in to one.

So, if you want a device that will be able to provide you with every technological aspects that you need to function in your everyday life, getting the Apple iPhone 3G would be your best choice.

## **A Glimpse on the iPhone Software**

The main operating system of iPhone is frantically based on iPhone OS which created different variants of basics driven by Mach kernel originally formed from Mac OS X. Core animation is included in the entire operating system of the component. The application is basically responsible for driving out smooth and enticing animation which is used on the user interface. Generally, the operating system is composed of considerable amounts of less than half of the memory of the iPhone's total storage. The memory is expected to support tons of loads with applications made exclusively for Apple.

Similar to iPod, the device is typically managed with a version of iTunes 7.3 and is therefore compatible with the Mac OS X with a 32-bit Vista or Windows XP. Discovering a workaround was discovered for the previous 64-bit operating systems. Copying of applications from an iPhone to a Mac OS X is not that easy and takes a lot of effort to achieve. One must be able to write and compile the files for the iPhone specifically. Considering Safari, it is supported by applications via the web which are technically written in AJAX.

Application wise, there are indeed several noticeable applications wherein one can direly control or expand. These applications are embedded on the Home screen. Some of the applications are: camera, weather, notes,

calendar, photos, maps, clock, stocks, setting, YouTube, iTunes and most importantly, text messaging. Docked at the bottom of the screen are four additional applications which delineates the purposes of Safari, iPod, Phone and Mail.

For those who are fanatics of watching different kinds of entertainment, YouTube has got to be one of your favorite applications. Upon entering YouTube, you automatically extract videos which are then streamed to your screen. You can easily get hooked with YouTube through the WiFi, 3G or even 2G. After you have encoded the video of your choice, you can open it up by using the H.264 codec to where YouTube was able to convert videos of more than a hundred thousand. Result is, one can instantly view a video selection from the YouTube application.

Some of the most recent updates made by Apple for this device is the free public updates of the gadget's operating system through the infamous iTunes wherein it follows the same fashion that iPods are being updated. Patches for security and features which are improved are likewise released in the same respective patterns and features.

The features of the operating system of the device that makes it very remarkable is that it allows video conferences through audio, call merging, integration with phone functions which allows other related devices, cellular networking features, call holding and a caller identification. Visual voicemail that is also included allow users to view several lists of recent messages via voicemail on the screen without even having to connect through their

voicemail numbers. Compared to other systems, messages can be “listened to” and be discarded in no chronological manner just by choosing the unwanted message on the screen list.

In order to accommodate the innovation of Apple to the operating system of iPhone, companies like O2 and AT&T modified the infrastructure of their voicemail. There came a time when lawsuits are filed against the joint incision of AT&T and of Apple because of some claims about visuals of voicemails which infringes patents of the two.

## **Apple iPhone Applications Will Simply Amaze You**

In the world of mobile phone technology and multimedia gadgetry, the iPhone is considered to be one of the most amazing devices ever made. In fact, ever since it was launched in the market, people started going crazy about it. Besides, with all the amazing applications, it changed the way people see personal computing devices.

Indeed, the iPhone is considered to be the first and the true personal computer where you will be able to do all sorts of things in one small and neat package.

Not only that the iPhone looks cool with its sleek and stylish design, it also delivers what no other mobile devices can.

There are basically so many applications built in to this device which can eventually make your life a little bit easier to live.

With the iPhone, you will see that it will be able to offer you a lot of tools that can help you with your everyday life. In fact, its calculator isn't just an ordinary calculator, but it will also be able to help you measure just about anything. From mileage, to simple savings calculator and even to federal tax calculator, you will see that the iPhone will indeed give you everything that you need.

Whether you are a student or a busy executive at a multinational company, the iPhone is the right tool for you.

The Apple iPhone isn't just a tool for business and studies, but is also a tool that you can use for fun. You have to remember that the iPhone is more than just a mobile phone. But, it also serves as an iPod where you will be able to store and listen to your favorite music as well as watch your favorite videos. Other applications will enable you to look for the nearest restaurant in your area as well as movie theaters and even bars.

Also, the iPhone offers a variety of games that will be able to keep you entertained wherever you go. Whether you fancy action games, strategy games, or online games, the iPhone will be able to give it to you.

If you are a sports lover, then this gadget will be able to provide you with everything that you need. For example, if you are traveling and your favorite game is on, you can be sure that the iPhone will keep you up to date with real time news on what's happening in the game.

If you travel a lot, then you will definitely love one of the iPhone applications that will be able to update you with traffic. With this, you will be able to avoid heavy traffic in cities all over the United States. Another great application for international travelers is the language translator. With this great application, you will find it easier to communicate with other people where English is not their primary language.

The weather application is also a great device. If you ever plan on going to Florida to enjoy a day at the beach, you will be able to know if the weather there is ideal for you to get a tan or not.

Lastly, the great thing about the iPhone is that it enables you to download more applications from the iPhone application store. This means that you will be able to personalize your iPhone according to your preferences.

So, if you want a mobile device that will be able to provide you with all the applications you need to make your life a bit easier to live, the iPhone is definitely the device for you. Whether you are a college student, a traveler, or a busy businessman, the iPhone will surely have the right applications for you.

## **Apple iPhone The Smartphone That You Will Definitely Want to Have**

Do you want a mobile device that will be able to provide you with everything that you need? Whether you are a businessman, a student or a regular person, you will see that the Apple iPhone will be able to provide you everything that you need while you are on the go.

In fact, the Apple iPhone is considered to be the world's first real personal computing device. With this device, you will see that it will be able to make your life a little bit easier to live.

So, just what can the Apple iPhone provide?

Aside from its sleek and stylish design, the Apple iPhone offers quite a lot of applications that you will truly want to have. It is a phone with no buttons and no physical keyboard, but offers a large LCD multi touch screen that will serve as a way for you to navigate through the phone's different features.

The iPhone also has a built in camera that will allow you to take pictures of just about anything.

Another great feature is that the iPhone has a portable media player that is equivalent to the Apple iPod, which will allow you to enjoy listening to your

favorite music while you are on the go.

It also has a visual voicemail as well as text messaging that you can use to communicate with other people. Another feature that the iPhone can provide is its internet services. With the ability to connect to a WiFi connection, you will be able to access the internet as long as you are inside the WiFi hotspot. If not, you can always use the GPRS to connect to the internet.

Upon its release, the Apple iPhone has a storage size of 4GB and 8GB. Depending on your storage needs, you have the option on which storage capacity to go for.

The only downside about iPhone is that it doesn't have any memory card slots for expanded storage.

The Apple iPhone also includes a rechargeable battery that is not user-replaceable. However, if the battery reaches the end of its life, you can simply take it back to Apple and get it replaced. If the battery is still within its warranty, you can get it replaced for free. However, when the battery dies when it is already beyond the warranty coverage, you will need to pay a fee as well as purchase a new battery for it and get it replaced.

Another great feature that iPhone provides is that it is able to locate itself despite lacking any GPS hardware. It makes it possible thanks to cell towers and WiFi networks. Later models, such as the iPhone 3G now has

A-GPS included but will still use cell towers and WiFi to locate itself. But, it will be more accurate than the older models.

As you can see, the Apple iPhone do have a lot of great features and applications that you can use. With it, you can be sure that you will be able to live an easier life.

If you want, you can even download and install more applications and games that you need.

Whatever it is, the iPhone can be personalized according to your preferences.

So, if you want a one of a kind mobile device that will be able to do almost anything, then you will definitely want the Apple iPhone.

## Digging into the iPhone Hardware

Apple introduced iPhone as a device which is distinguished apart from any other phones because of the hardware that was modified to amaze and make people love it's every angle. To better know the system involving the hardware, it is important to dig into the details of the report. The inner core of the iPhone includes its interface and screen, audio feature, battery, SIM card enabler, storage and other accessories.

### Interface and Screen

Screen was made as a nine centimeter liquid display which includes an HVGA touch screen. The glass of the screen was specifically made to be resistant to mild and moderate scratches that may collide with its surface. The screen was created specifically for the fingers out of sensing through multi-touch, meaning no keyboards and clicking through every key just to achieve the desired composition. Because of it having the capacity to be manipulated through multiple fingers, it is a requirement that the device goes bared-skin. A normal glove or styles enables the prevention of conductivity of electricity.

Every input is focused on the screen which has the capacity to understand gestures either simple or complex via its multi-touch. User interface within the device enables the person using it to move any contents through

touching and dragging the finger up or down and even left and right. Zooming of pages is one very good application of the interface.

### Audio enhanced

Similar to current featured smartphones, the device also has headphones but with an added microphone. Basing on the microphone, there is a button which serves to be multipurpose and can be used to stop, pause or play a particular song. The button can also answer several phone calls and end one and skip music that you don't like, which all can be done without even touching the phone. Earpieces, wireless in nature, which is supported by Bluetooth application, can communicate with the device and are separately sold although, it does not support stereo audio.

### Phone battery

The gadget has a built-in battery which is conveniently rechargeable and is not replaceable, dissimilar to almost several mobile phones existing. Once the battery has reached the end of its life in a premature state, ideally, the phone can be returned to Apple and be replaced for another but must still be within the given warranty time – usually about one to two years from the time of purchase. If the warranty has already expired, one can replace new battery although he or she has to pay for it, shipping charges included.

### SIM Card

Originally, the equipment showed its SIM card in an open slot being ejected. For those countries having the gadget, the device is sold with a SIM lock that prevents the use of SIM cards to other networks.

## Storage

Initially, iPhone was released with 2 options for its internal storage which can either be 8 GB or 4GB. Time came when Apple announced that models having only 4 GB memory are going to be discontinued in its circulation to give way to a more expanded and reliable storage.

## Other accessories

Other items and accessories are already included upon purchase of the iPhone and iPhone 3G. Some of the accessories would include headset and microphone, cleaning cloth, dock connector, a USB adapter, and a SIM ejector tool. Some of these are made exclusively for iPhone 3G and some are present in both models.

## Discovering the Wonders of iPhone Technology

In order to discover the wonders of iPhone technology, one must sink into its different parts and features, although in this edition, there are top 5 iPhone facts that one must be aware of, from the release to the different applications it supports. Some might find it to be an advantage and some, a disadvantage. Either way, good or bad, here are the facts.

Supports video generating websites

Mobile phones were considered as a means of communication in the past times. Text messaging was then the single most important use of a cell phone and was one of the main features of mobile manufacturers. Today, the youth seem to convey the importance of having a mobile phone which can browse and even stream music videos and movies from their source. On the other hand, while some are very well satisfied with the performance of the device in terms of surfing through the net and checking out important e-mails, others are still unconvinced on the matters of its connectivity edge via Wi-Fi because of the precaution that access will not be as smooth as expected.

Supports iTunes

Apple has accomplished this very vital part of human-melodic life. A lot of

people purchasing the phone had the sole reason of having one because of the musicality features. Other phone manufacturers have tried putting up a model that will sufficiently feature downloading songs the easy way. There are a lot of struggles done in order to put up with the idea of organizing a multimedia management through phones basing from multimedia order. Technically, iPhone has successfully done its part in managing this kind of predicament and has filled up files with top rating contents of the multimedia field.

### Interface based on the user

Mac OS X is a kind of user interface which is primarily featured by Apple. Although, it has been easier for competitors to replicate the idea. Apple has decided not to open developers belonging from a third party. The downfall of those who replicates the idea of having user interface is that it becomes a hassle instead of an advantage because of slow loading and sometimes, it never gets to the loading part at all.

### Screen display

This is considered as Apple's pride – the display. The phone's display is about 3.5 inches with a 320 x 480 pixels display. The touch screen feature made it impossible for other competitors to beat Apple basing on market value and capability of mobile phones. Upgrading surface display to a high quality optical glass from plastic is one of the major factors why the device has become more scratch-proof. The more reason why people love it

compared to other devices.

## Release reviews

There are a lot of murmurs regarding the release of the device. Although, this didn't stop the manufacturer to introduce it to the technological world. It has a retail price of \$499 that is tagged for the 4 GB storage and \$599 for the 8 GB storage. The contract was signed for AT&T for two years. Compared to other phones that has already been released and made ground breaking moments through the communication world, the price tag was quite reasonable and has proven its worth.

It has become record-breaking that Apple reached its mark and was well-appreciated by advocates all over the globe.

## Free iPhone Wallpaper

After the iPod, Apple released the iPhone which hit the market like a storm. What is an iPhone? You can simply define an iPhone as an entertainment center and a phone in one. One of the many features of the iPhone is the wallpaper. You can get wallpaper for your iPhone online and you can even get them for free. The iPhone itself is already cool but if you can get wallpaper, your iPhone becomes cooler.

Putting some accents on your iPhone makes it more personalized. There are lots of websites that you can find which offers iPhone wallpapers. With so many links to choose from, it will be a difficult task to pick the appropriate wallpaper.

Firstly, you need to decide on what you want your wallpaper to look like. Do you want to have a wallpaper of your favorite artist, music group, actress, or actor? The decision is yours; just pick one category and then conduct a basic search online. You will get more specific results and it'll be easier to choose the wallpaper for your iPhone. You can use any of the major search engines that you can find on the net. Simply type the keyword like 'artist wallpaper' or to be more specific, type the name of the artist followed by the word 'wallpaper'. The results are already narrowed down and so it will be very simple to pick one.

Small and big companies provide wallpaper downloads. Some downloads cost a bit but you can stick with the free ones so that you don't spend any cent on the iPhone wallpaper. These companies run their business online through advertisers, donations, photography, and artwork. Thanks to the many gifted designers, iPhone wallpapers are all over the web. In picking the wallpaper site, you can already tell if it's a free or paid site. Some customer prefer the paid sites because they claim that the wallpapers there are cooler and among the latest or hottest in the market. There are also those who prefer free sites and with diligent search, you may be able to find the perfect wallpaper for the iPhone.

The internet may be full of helpful resources but you should also be extra careful in downloading anything for your iPhone. You see, some downloads can harm your iPhone and your computer because the files have some sort of adware or spyware. When visiting websites, it is highly advised that you stick with highly reputable websites to avoid any problems. If you encounter any suspicious site, stay away from it even if what they offer is quite tempting.

iPhone and cellular phones are extremely competing against each other. Cell phones usually have wallpapers and so Apple also decided to include this feature in the iPhone. One way to stay competitive in the market is to meet the various needs of the customer. Apple is able to realize the need of the people for continuous entertainment and communication. Now, you can communicate with your family and friends through the iPhone; and not only that, you can also listen to your favorite tracks anywhere you go.

Get yourself a new iPhone now and be one of the hip and cool youngsters out there. Listening to music is very relaxing and if you're too busy at work, just put on your headphones and try to unwind.

## How to Find the Best Music Download Service for Your iPhone

Ever since iPhone hit the market, people started to become crazy about it. In fact, iPhone sales today are still going up and a lot of people are still buying it. So, just what makes iPhone so popular among a lot of people?

Well, for starters, it has a lot of capabilities that no other phone has. It has a touch screen LCD where you don't have to fiddle with keypads anymore, and it has amazing graphics capabilities that will blow you away. The LCD itself is considered to be the largest in mobile phones and you can even clearly see movies in it without your eyes squinting to see the details of the movie or the video you are watching.

The Apple iPhone can also let you go online through WiFi internet access. Just be inside a WiFi hotspot and you will be able to surf the internet with your iPhone.

And, the best thing about the iPhone is that it has the capabilities of your iPod, which is let you listen to your favorite tunes while you are on the go.

iPhone is basically a hybrid between iPod and a mobile phone.

And, with music playing capabilities, you may want to know which website

you should visit in order to download your favorite music.

To start downloading music in to your iPhone, it is always safe and legal to go for a paid website. Although you will need to pay a subscription fee in order for you to download your favorite tunes, you can be sure that your computer as well as your iPhone will be safe from malicious programs or computer viruses and spyware software. Also, you can be sure that it is a hundred percent legal as most free music download websites are P2P websites that are known to be dangerous and illegal.

For a minimum subscription fee, you will be able to download your favorite music to your iPhone safely and legally.

When looking for a website to download your music, you might want to join a download website that offers a lot of download variety. You have to make sure that they have a huge library of music files available for download. You need to remember that some people may like pop music and you may not. You have to go for a website that offers different variety of music genre, such as pop, rock, acoustic, nu-metal, emo, classical, and others.

Another important thing that you should look for is the download interface. Is it easy to understand and operate? Is it easy to navigate from file to file? Always make sure that the interface should always be simple to use in order to make the most of your download time. Also, make sure that the download speed is fast enough that it won't take you an hour just to download a single song with a high speed internet connection. In fact, it

should only take you 2 to 4 minutes or even less depending on your connection speed to download a song.

Lastly, you have to look for an after-sales customer support service in the download website you plan on getting your music for your iPhone.

Technical support is important as there will be times where you may need help to troubleshoot when you are facing difficulties with your downloads as well as your iPhone.

Remember these tips and you can be sure that you will be able to find the best music download website to download your favorite tunes for your iPhone.

## **iPhone Applications for the Health Conscious**

The Apple iPhone is now one of the most popular devices today. Ever since it was introduced in the market, people started going crazy about them and up until today, people still want one for their own. Besides, with the iPhone, you will be able to combine a multimedia player with a mobile phone. With it, you will not only be able to communicate with your family and friends, but you will also be able to keep yourself entertained by listen to your favorite music, watching your favorite videos or movies, as well as play with your favorite games.

These are only the beginning of the many things that you will be able to do with your iPhone. In fact, you can even personalize your iPhone to your preferences by adding some of the cool applications available for iPhone. All you need to do is download it from the internet and install it in your iPhone. You can download the applications from iTunes or you can search for what you want in other iPhone application download websites.

If you are concerned about your health, you will see that there are quite a lot of applications that you can install and use in your iPhone. With these applications, you will be able to monitor your health and even your weight if you are on a diet or you are working out.

One type of application that will be able to let you know about your health is

called the PointsCalc. This application will be able to allow you to estimate nutritional value. All you need to do is enter the calories, fat, fiber and other nutritional value of a particular food and it will tell you about its nutritional value. The great thing about it is that you don't have to go online to find out about the nutritional value of a food.

Another great application is called 2Fat. This application will allow you to estimate body fat as well as your body mass index. All you need to do is put in your weight, gender and waist measurement and the application will be able to calculate and estimate the amount of body fat you have in your body as well as your body mass.

Epocrates Rx is another interesting application that you can install in your iPhone. This particular application will allow you to get information about 300 different types of medication and also its dosing, its pharmacology, as well as its adverse reaction. You can even look up its price. With this application, you will be able to identify any medication that you may have forgotten about as it will have pictures of the medication in order for you to further identify it. This is very useful in order for you or your family members to avoid dangerous combination of different drugs.

The Weight Tracker is another iPhone application for the health conscious. This particular application does what it's named. It will allow you to keep track of your weight and can serve as a tool for motivation for you to lose weight. This application will also allow you to send the information to a website in order for you to see your progress in the gym as well as your

dieting.

Another iPhone application that will help you with your dieting is the Restaurant Nutrition. The results may scare you but you will be better informed about what you are eating especially if you eat fast food.

These are some of the applications that you can install and use in your iPhone. With these applications, you can be sure that you will be able to keep track of your health and make sure that you are living and eating healthy. There are a lot more applications that you can download and use in your iPhone.

Whatever it is you are looking for, you can be sure that you will be able to find it.

## **iPhone Applications That You Would Really Want in Your iPhone**

The iPhone is a device not just for the geeks to enjoy but it is a device for everyone. The iPhone is one versatile device where you can personalize it according to your preferences and install a lot of cool features that you would really want to have while you are on the go.

Music and movie playing capabilities as well as the touch screen capabilities are just the tip of the iceberg. The iPhone has a lot of cool applications that you will be able to download from the internet.

Once you purchased an iPhone, you have the option to personalize it according to what you want. With thousands of different applications that you can download to your iPhone, you can be sure that you will definitely make your iPhone a unique iPhone.

Today, almost everyone has an account in some of the most popular social networking websites. For some people, these social networking websites are now considered to be the primary means to communicate with family and friends. If you are one of these people, then you may want to download a special application for iPhone that will enable you to visit your account in either Facebook or MySpace. With this application, you will be able to check your social networking account in Facebook or MySpace anytime and anywhere you want.

Another great iPhone application is called Showtime. This particular application is for movie lovers that want to research upcoming movies in the nearest theaters. This particular application will be able to find movie theaters nearest to you and will display the movies being shown in that movie theater. It also provides the movie ratings from the critics as well as a background of the story in the movie.

WeatherBug is another iPhone application that is generally for anyone who is always on the go. It will be able to give you the current weather in the state you are currently in or even the whole country. Also, it can provide a map that shows the storm track. It will also enable you to access weather cameras as well as satellite maps.

Other iPhone applications even make use of the GPS capabilities of your iPhone. For example, some applications will be able to find the closest restaurant from your current location. One application is called the iWant. This application will enable you to find whatever you want to spend your money on whether it is for food, lodging, gas, banks, and even coffee. Whatever you want to spend money on, the iWant application will be able to find it for you.

Some applications are games that you can install in your iPhone. With this, you can be sure that you will never get bored while you are traveling again. There are hundreds or even thousands of games that you can download in to your iPhone. So, you will never run out of options. From simple Sudoku

puzzles to popular arcade games to card games and a lot more, you can be sure that you will find the game that you will truly enjoy.

These are just examples of the thousands of applications that you can download and use with your iPhone. In fact, some applications are even tailored to some people's needs. For example, there are iPhone applications that are specially designed for divers to computer their dive table.

Whatever you want, you can be sure that you will find the right applications that you need in your iPhone.

## iPhone Battery Replacement

Do you have an iPhone? If you do, then you're probably concerned about battery replacement. You see, the Apple iPhone's battery cannot be replaced by the user. The battery is located inside the stylish gadget. Users can't simply take out the battery and purchase a new one; they still need to send the iPhone to Apple Store just to have the batteries replaced.

Consumers are frustrated about the battery replacement issue of their iPhone but they can't do anything about it. Developers of the iPhone are still trying to come up with effective ways to expand the gadget's capabilities, including the removable battery. Hackers are also on the move because they want to find out how to switch the batteries of the iPhone without going through the usual process provided by Apple.

Most of the very first customers who purchased the iPhone were unaware that the batteries are not replaceable. They were simply attracted by the iPhone's crossbred iPod and cell phone features, internet-capable device, and digital camera. Apple was able to post about the battery replacement procedure on its official site after the products were already sold in the market. Apple iPod players and the iPhone follow similar procedures when it comes to battery replacement.

Apple has its battery service provider where the consumers can have their

iPhone batteries replaced. The whole process takes 3 business days and the service cost is over \$70 plus the shipping cost of \$6.95. So you see, you will not be able to use your iPhone for three days.

However, Apple was able to determine the customer's anticipation for battery replacement and so they offered the iPhone loaner for \$29. The iPhone loaner can be used for three days while your iPhone is still with the battery service provider. Keep in mind that once your iPhone's battery is replaced, the service process will also eliminate all the data on the gadget. Make sure that before you take the iPhone to the battery service, you've already backed up your music files, text messages, account settings, photos, contacts, and other important data. Apple will not be held responsible for any lost data and it is also highly advised that you remove all the iPhone accessories before the battery replacement procedure.

To answer the demands of the consumer, last July 2007, independent battery service providers emerged in the market which was not related in any way to Apple. These battery service providers charged lower fees and they also provided battery packs. The battery packs are now widely available but if you choose this alternative, you need to have a soldering iron in order to complete the task of replacing the iPhone battery. However, if you're using the 3g iPhone, you can't make use of the battery packs and you need to contact Apple first.

iPhones usually cost between \$499 to \$599 and you will also need to stick to the 2-year AT&T service plan which costs \$60 per month; that is, if you

don't unlock your iPhone.

Apple should have disclosed the battery replacement info sooner so that the customers knew about it in advance. The damage has been done and if you have an iPhone and you need to replace its batteries, contact Apple battery service or you can simply purchase the DIY battery packs; so which alternative are you going to choose?

## **iPhone Breaks the Silence of Technology**

iPhone is a product proudly made by Apple which has the capability to be connected to the internet having flush multi-touch visuals and an expanded hardware interface. Because the iPhone lacks the physical features of having a keyboard or keypad attached to its system, a built-in virtual keyboard was rendered for the device to become touch-screen. With its introduction, a grasp of thrill was made through the air of technology addicts.

A lot of people are quite amazed with the different features and how sleek the phone is. Some of the famous functions of the device is that it offers a multimedia portable player, a camera is incorporated, visual voicemail and the traditional text messaging are included in one little gadget. The device also offers services via the internet that includes browsing through the web, connection to Wi-Fi and e-mail.

On January 9, 2007, Apple proudly announced and introduced the technological advancement to the world. After the announcement, a lot of comments, speculations and rumors were attached to the device and circulated for a couple of months. Nevertheless, fans all over the world were still on the verge of needing to have one on the palm of their hands.

Introduction of the iPhone was first made in the United States dated June

29, 2007 and is still on that stage of introducing it to the countries. In honor, Time Magazine named it as the Invention of the Year 2007. Last July 11, 2008, a more famous version was released which supported a faster 3G speed which was known as iPhone 3G.

Because of the hype, the demand for iPhone has grown in the past few months of its peak. Although, its distribution to the world market is gradually taken because of the availability issue that may be in the coming months or even years. Some countries are already experiencing the technology's fantastic features. It's like giving yourself a chance to become attached to the world at any time, anywhere.

Genesis began from Apple big boss Steve Jobs. He instructed that engineers working for apple should investigate on touch screen technology. Apple was responsible for creating the gadget away from prying eyes – it was all too unprecedented and technically secretive because of the tie-up with AT&T.

While developing the device, it then had a codename – Purple 2. Apple insisted on rejecting the first design that was made by the committee that was in favor of customizing interface and operating system and also building a customized hardware. On the day of its introduction, Apple proudly sold about 270,000 sleek devices during its first 30 hours from the time it was launched. 2007 was a streak for Apple because just within that span, the phone was sold amongst eight million advocates just within the United States. Also, the original device was sold subsequently in countries

like France, UK, Austria, Germany and Ireland.

iPhone 3G was released on July 11, 2008 in more than twenty countries wherein the first six were still included. The very first iPhone 3G was sold in New Zealand. During its first three days of sale, Apple succeeded of making one million iPhone 3Gs sold.

While other countries are already watching out for a newer version, others are still anticipating for the coming of the original and the 3G version. Goes to show that iPhone was successful in its gala.

## iPhone Complaints

Until now, a lot of people are still craving for one of the hottest gadgets in the market – the iPhone. Customers are still queuing for many hours just to get an iPhone. However, there are still iPhone complaints despite its stylish and sleek appearance.

iPhone owners are often dismayed by the gadget's hardware and software features. True enough, the iPhones are most-loved by many people all over the world because of its high resolution and sleek touch screen. Its exceptionally slim design attracts many people from different age groups. When it comes to the price, some individuals are also discouraged to purchase it since the iPhone features are also available in other phones which are much cheaper.

A very common iPhone complaint has something to do with the connections. Oftentimes, brand new iPhones can't be used by the owners because of jammed network connections. Others complain about iTunes communication failure; after several days, the iPhone can be activated but some customers feel frustrated with the gadget's software and hardware limitations.

When it comes to the iPhone hardware, here are the complaints:

- it only has a 2 mega pixel camera while other cheaper phones offer 5 mega pixels camera - iPhone headphone jacks are specially designed for the gadget and you can't just use any other headphone, even if its of better quality

- There are also those who complain that the iPhone screen scratches easily and further scratches are caused by the sleeves and cases

- iPhone batteries are not removable. If you want to replace it, you still need to send it to the Apple Store and you have to pay \$69 for it. It would take about three days before you get the replacement. Carrying batteries with you all the time is of no good

- People with larger fingers will find it hard to use the iPhone because of its touch screen. If you want to send or open files through Bluetooth, you can't do it with the iPhone.

Aside from the hardware complaints, there are also iPhone software complaints. For example, voice dialing through the iPhone is not possible; there are only 25 tunes that you can use as a ringtone and it is also not possible to get iTunes music and use it as a ring tone; customers who send files or blogs by email will not be able to cut/paste text through iPhone; MS Office documents can only be displayed on the iPhone and you can't edit or create new ones; despite the gadgets' high –resolution screen, the web browser lacks Flash support and this means that some multimedia rich sites will not open.

A lot of people are already aware of the iPhone complaints but since owning an iPhone is like a trend, sales of the gadget continue to increase year after year. iPhone has incredible features but that doesn't change the fact that many customers encounter problems when using the fashionable gadget.

If you're not that conscious about following the latest fashion trends, then perhaps you can invest in other more affordable gadgets like the iPod and some phones that offer the same or even better features. Just make sure that the item you choose meets your lifestyle and suits your needs.

Investing in an iPhone is good especially if you're always on the go and you love listening to music. So, are you still going to purchase the fashionable gadget despite the many customer complaints? Well, it's up to you.

## **iPhone Fit for Business Transactions**

There are a lot of specifications about iPhone being one of the most effective devices ever made to handle the hassles of business. What makes the phone extraordinarily perfect for business icons? It shows evidently in the features on how its simplicity can be the sole and effective buddy for businessmen and women.

What makes the device great?

Simple – a 2.0 software system, supports ActiveSync for Microsoft Exchange, calendar for important meetings and events, quick email delivery system, and organizes your contacts. It is a phone that does more than what one can expect to an enterprise. It can also give the users access of security to resources with different wireless services. It addresses different issues of manageability, integration and security. With these important features that an entrepreneur needs, it is expected that the demand for the device's significance will be at its peak.

E-mail at its best

This is innovation at its finest degree. Email in this phone is definitely one of the best features Apple has reinvented. It is not like any other mobile phones. With its HTML that is rich in outlines and formats, the email will look and act according to the emails from your computer. Supported by

Excel, JPEG, PowerPoint, Word, and iWork, the phone attachments can now be viewed in the expected format as they are needed to be. Owners can even have the opportunity to zoom in and zoom out on different important matters just with the tap of the icons. And because of support coming from Microsoft Exchange ActiveSync, owners can now have the benefit of having push email.

### Calendar up-to-dates

Multi-touch interface creates a simple yet more intuitive pace of the phone. No other calendar phone can top to that kind of achievement made by Apple. Through tapping, you can monitor who's on the list, check conflicts in the schedule, review important agendas and even add common alerts to remind you of something really vital. Schemes of color coding make it easier for the user to check for the organization of events at a glance. Integrated support and push calendar made for time zones only means that owners of the phone can be updated anywhere they go.

### Easy contact search

This one's the easiest part of dealing with your phone. It's as simple as scrolling through and fro from your list. You can choose to change or add a certain contact number and automatically updates different data. What makes contacts ideal for businessmen and women is that it has integrations which are seamless like Safari, SMS and Maps. Using Maps, you can find a certain business establishment or customer for that matter through GPS.

You can get specific directions on from the listings on the map in order to confirm your queries. Using GAL or Global Address Lists you can search for contacts in a faster mode companywide. You can bet that with push contacts, listings are always updated.

Get smart with phone features

To top it all, iPhone has given business icons a way to manage their work easier. Voicemails are automatically prioritized in order to know the messages that should be listened to or not. Indeed, the smart features of an iPhone has astonished and impressed the likes of people who have engaged in trusting the phone do tedious tasks.

## **New Apps for Your iPhone**

Apple has definitely hit the market. More and more people, especially the younger generations, are now purchasing the iPhone. Because of the increasing demands for the iPhone, Apple has released new apps to make the gadget more attractive and awesome.

Here are some of the new iPhone apps that you might want to look for:

1. iNotes – Are you familiar with Lotus iNotes? Well, isn't it great that today's iPhone allows you to have a 'second memory' at your own fingertips? Lotus Domino is now available through your iPhone through the services of IBM communications. The message server allows you to access your email, calendar, and contacts very easily.

2. ZRx Prescriber – Well, ordinary individuals don't find this app of much importance. However, if you're in the medical field or you're a doctor, this app may be of good use to you. This prescription tool by ZoomMed is of great value to doctors and it is already available for the iPhone.

3. Travel Guides by Frommer – a lot of people want to take a vacation but oftentimes, they lack knowledge as to the best vacation destinations. This travel guide app by Frommer is available in the iPhone and it can help you with your vacation planning. It is like a tour guide found right inside your

pockets. With the iPhone, you can now access travel info such as vacation reviews, recommendations, maps, and excellent locations. Just this year (2008), the first editions were already released which includes San Francisco, London, Paris, and New York.

4. iOnce – Correspondence is already a part of your everyday life but for those individuals who store a lot of account information and correspond through online banking, email accounts, social networking, airline miles, internet gaming, dating, and many others, you will surely be amazed by this new app called iOnce. Through the program, you can access different websites and even online security is not a problem. You will also be able to get alerts if there are upcoming payables and you will also be able to manage postings, bids, or even alter itineraries. You can already find this app at the App Store. The app was created by Pageonce, an Israeli company.

5. World Racing GTS – lots of iPhone users are also gamers. This app is especially made for gamers and iPhone users. This is a car race game with 16 settings and 64 tracks. It has four play modes which include Single Race, Challenge Cup, Grand Tour, and Championship. The mobile features can be handled through the iPhone's accelerometer for steering, acceleration, and braking. You can also 'pause' your game just in case you need to attend to something important.

iPod Touch users can also look forward to the amazing new apps. The apps are already available online and even in offline stores. If you want,

you can choose among these five new apps so that you can now enjoy it through your iPhone.

Apple will remain competitive in the market because of the new apps it released. The younger generations will truly enjoy these amazing apps. Hurry and get the suitable app for your iPhone now.

It would be best to visit the site of the Apps Store of Apple so that you can easily access the new apps. Show your friends your iPhone now and share the new apps with them.

## **Not Just your Average iPhone Camera**

An iPhone is not just a gadget which can suffice your every means of surviving the crazy techno world and being regarded to as one of the pros. Even the simplest person can make the most out of an iPhone, especially when it comes to a more complex, yet sophisticated feature of an iPhone. And that is taking specific pictures with no worry of discarding it because of a blurred resolution or the lighting is just isn't that convincing enough.

To better understand the quality of picture that the iPhone can take, consider these simple structures created for review. What this review offers is a sort of straightening out differences and particulars about the ups and downs of the device. But nevertheless, this article will give you a clearer view of the real deal out of the camera's effectiveness in taking clear shots.

Quality is always demanded from providers of services. That is what Apple is trying to convey through their device. The greatness of the resolution and overall performance of the camera for sharing and viewing photographs taken may have some issues, most especially on the manner of taking the picture itself. Some seem to be confused by the complication it conveys, although some would beg to differ.

As a camera phone, Apple wasn't that specific on how their phone's camera would be like. Impressive isn't really the term to be given when

rating the phone's camera. Some would even compare how stiff the phone is when it comes to capturing images, most especially, moving ones.

## Taking a Clear Shot

It's not as convincing as it seems but taking shots through the phone can be quite demanding and hurls a challenge to Apple. The trouble is towards capturing. In some sense, the camera is somewhat a priority add-on to Apple to add further breakthrough to the said device but, the expected outcome wasn't as stunning and impressive as some may think.

Development of the camera's fine shots didn't make the core of a die-hard fan. What's hard to ponder is that, despite the facts, Apple has claimed their device would be on top of it all, their camera features nothing more than an ordinary camera for those who have the actual phone. Worse, it doesn't even have a zoom feature or a flash.

The idea is that, the camera will play the part of taking moments instantly and then being a one way ticket to view live disorienting feeds from another part of the world all in one. Lag is substantially evident every time the icon for taking pictures is pressed.

It would take a couple of milliseconds to perfectly capture an image and take things into the file. Unfortunately, expecting a more fruitful and fun episode of your kids playing or running with your dog will not be as dramatic as you expect it to be. Evening shots are otherwise grainy and blurry

especially when lights don't come out naturally beyond a background.

## The Real Deal

Score is, Apple made their camera featured in such manner so that viewing and sharing can be made easier. Actually, compared to viewing and sharing systems of other phones, iPhones have indeed manifested one of the greatest system and all the while maintaining the sleekness. Apple focused on this last part rather than how a photograph would turn out to be. Photos taken from iPhones are easily accepted by websites.

Easy sharing of recent photos can be made possible because of this feature.

## Syncing Through your iPhone

Got an iPhone and have no idea on the Hows of its syncing strategies? Sit back and listen. The moment you have already activated the system of your iPhone, it will instantly forward you to the management page of syncing. If you had an iPod, this page would definitely look familiar to you because it has certain similarities regarding its content and management data.

The moment you get to the syncing management page, your phone will begin to forward you in the syncing contacts page automatically. Contacts are not the only ones that are being synced but also bookmarks on the web, accounts of emails, and even events in your calendar. You can also sync in music, videos and even movies inside your phone. You have the choice to accept findings of the manager then automatically sync it then customize it. For you to change your options for syncing, you can just click on tabs that are found at the upper corner of your screen.

### Calendar, Email and Contacts Synced

The manager's work is done when it has synced every detail that needs it like your calendar data, email and contacts. If you wanted to control these kinds of information in your phone, just click on the Info icon. On the other hand, if you wanted to see what is already synced or have the notion to change it, click on the tab.

Once you have clicked it, you will find certain listings for the whole entries that iTunes have found inside your computer, the options and what was synced. Changes will happen if you click on the checkboxes which corresponds to the kind of settings that you would like to see. You can choose to sync the entire data or select items to be synced in a certain section. The moment you have done changing things, click “Apply”.

## Music Syncing

Compared to other iPods owning the fifth generation or iTunes libraries, the phone has such a smaller capacity to store music therefore; it is not advisable to sync all the music that you like inside your device. For you to be in control of what music to bear, click on the tab.

The music tab will let you choose syncing all music, selected number of playlists or even nothing at all. Syncing your music choices doesn't happen instantly the moment you turn on your phone to iTunes. Somehow, you have to do the work manually because of preferences that should be taken into consideration. You have to reiterate if you wanted to sync or resync an entire field of songs into your downloadable phone. When changes are made, click “Apply”.

## Photo Syncing

Syncing of photos can be easily done with the aid of your device's library

iPhoto. You can choose the photo library that you want to sync in your phone by clicking on the tab. After the interventions, click on “Apply”.

## Video Syncing

Same with the latter, you are given the choice to sync some, other, or even none from your library to your phone. Once you have done the changes, don't forget to click on “Apply”.

## Resyncing for Updates

The moment you have done all your syncs in your settings, click on the button for syncing to be able to resync your iPhone to iTunes and voila, your contents are back in their proper places.

## **The Apple iPhone 3G Providing You with the Best Features**

The Apple iPhone did revolutionize the way we see mobile phones today. Just imagine, in a small hand held device, you will be able to do almost anything that you can do in a desktop computer or laptop. Today, the new iPhone 3G offers a lot more with its new features.

Whether you are a businessman, a traveler, or just a regular college student, you will see that the iPhone 3G will be able to provide you with only the best tools that will make your life a little bit easier to live.

In a technologically dependent society that we live in today, you have to consider that we can never afford to be slow. At a moments notice, something changes that may affect your life. Because of this, it is important that we should always be updated with all the things happening in our surroundings. With iPhone 3G, you will see that it will be able to provide you with this kind of power.

For example, if you are driving to another state to attend an important meeting for your company, it will definitely be frustrating to be caught on traffic. With iPhone 3G, it will be able to keep you up to date with the latest traffic news and also help you take the best alternative possible.

If you are a stockbroker, the iPhone 3G will be able to help you out by

keeping you updated with the latest news on what is going on at the stock market in real time and anywhere you are.

The Apple iPhone 3G also looks good. With its sleek design and large LCD touch screen, you can just imagine why many people starts to download applications, games, and even videos just to start enjoying the capabilities of the iPhone as well as the large LCD touch screen.

Not only that the iPhone 3G looks awesome, but it also provides people with the best entertainment possible. In fact, with the iPhone 3G, you will be able to download and listen to your favorite music while you are on the go just like you would with your iPod. Plus, it will enable you to watch your favorite videos. In fact, you can even download full length DVD movies in to your iPhone and enjoy watching it wherever you go.

The iPhone 3G also boasts a higher memory that you can extend up to 16GB. With this kind of memory, just imagine how many applications you can download and install in this phone as well as the amount of games, music and videos that you can store.

Another great thing about the Apple iPhone 3G is that it can be used for conference calling. It also has voicemail, and even Google Map applications. For internet browsing, the iPhone 3G offers the fastest available internet connection for a mobile phone.

With a powerful Li-Ion battery, you will see that it is capable of delivering up

to three hundred hours of use on stand by time and ten hours of talk time. With this kind of battery support, you can be sure that you will be able to use the phone without charging for longer periods of time. Also, you will see that the iPhone 3G will remain connected anywhere you go even in places where GSM is used.

So, if you want the most out of your mobile device, then getting the iPhone 3G is your best answer. With this, you will be able to make your life a little bit easier to live.

## **The Apple iPhone 3G The New Changes Made With the iPhone**

Ever since the Apple iPhone was released in the market, people never looked at mobile devices the same way again. With the iPhone, it literally changed the way people think about mobile phones. Today, another version of the iPhone was released in the market and this is called the Apple iPhone 3G. So, just what are the new features of this new iPhone that it may want you to upgrade?

Basically, the new iPhone 3G operates on the 3G network. In most cases, surfing the internet using the 3G network will be a lot faster than in other networks. This means that you will enjoy much faster internet browsing. However, the only downside is that the 3G network is only available at limited service providers, such as AT&T. The speed of the internet connection also depends on the coverage. You have to remember that you need to be in a place where 3G network connection is already available.

But if you do live in a location where 3G is available, then you will be able to fully enjoy what the iPhone 3G can offer.

When it comes to the case of the iPhone 3G, it's basically the same. However, the back of the case is now made with plastic for lighter weight instead of the aluminum. There is also a grill placed over the speakers in order to improve the quality of the sound. Another great improvement is that

the headphone jack was changed allowing people to use standard headphones without having to buy an adapter which can be pricey.

Another great improvement in the iPhone 3G is that it offers improved GPS service. It is much more accurate and you will be able to enjoy real time location updates and even driving directions. You will also be able to take advantage of the restaurant, bar, and even movie theater finder that this particular device offers.

However, the GPS service that iPhone 3G provides is not yet as accurate as standalone GPS devices.

Google Maps is also included in the new iPhone 3G. The only downside is that it doesn't include turn by turn directions, which means that you have to figure it out by yourself to find where you are. And, with the GPS service, it will be easy for you to do so.

The Apple iPhone also offers new and improved syncing options, which will be able to offer syncing your device to other devices, such as an online account, the Mac, and other mobile devices. You can also sync to the Microsoft Exchange email servers.

YouTube is also offered in the new iPhone 3G. Its new features include parental control, which will be able to restrict access to some of the videos featured in this website.

If you need a calculator, then the Apple iPhone 3G will be able to provide it for you. By flipping it sideways, you will be able to turn the regular calculator to a scientific one which can be very useful in complex computations that you would normally have to do when you are in college.

Keyboards are also available for the iPhone 3G and are now offering more languages.

These are just some of the great features offered in the new iPhone 3G. With all these upgrades, you will definitely want to upgrade to this iPhone.

## **The iPhone 3G The Perfect Phone for Doing Business**

A lot of people are now making the change to the all new Apple iPhone 3G. Besides, not only that this mobile phone looks good with its sleek and stylish design, but it also has a lot of features that will definitely make your life a little bit easier to live.

The Apple iPhone 3G is packed with features that you will definitely love. As a businessman, you will see that the iPhone 3G will have all the essential tools that you need to do business anywhere you go. With the Apple iPhone 3G, you will be able to do business even if you are not in your office or not in front of your laptop or desktop computer.

You need to remember that in business, you will need three necessary tools, which are email, internet and storage. The Apple iPhone 3G will be able to provide you with all these things and a lot more.

Basically, all you need to do is add your email account to your phone and you will be updated every time a new email arrives. And, the best part of all is that you will be able to read your emails as well as reply to them. You can even compose emails which is essential for any business. The fact that communication is one of the most important aspects in running a business, you will see that this tool will definitely come in handy.

The great thing about the Apple iPhone 3G is that the internet is much faster than in any other smart phones available today.

Another great thing about the iPhone 3G is its storage capacity. Starting at 8 GB and a memory extension up to 16 GB, you can be sure that you will never have to delete another message again.

Another great application that the Apple iPhone 3G can provide is that it will be able to provide you with a stock application. You can even download the Bloomberg Application which is free. With this tool, you will be able to keep track of the stock market in real time and know about the changes in the stocks you have. With this, you will never have to miss out in the opportunity to buy or sell your stocks.

After a hard day at work, you may want to try and relax. And, with the iPhone 3G, you will see that it will be able to provide you with this kind of benefit. With tons of music applications and with the large memory capacity, you will be able to store and listen to your favorite music while you are on the go. In fact, you can even download the songs you purchased in iTunes to your iPhone.

If you are more of a movie lover, then the iPhone 3G will be able to let you download and watch your favorite DVD movies on its large LCD touch screen.

These are just some of the many applications that the iPhone 3G can

provide. As you can see, it will be able to give you all the things you need to run a successful business. With all the business applications that the iPhone 3G can provide, you can never go wrong with this gadget.

So, the next time you plan on purchasing a smart phone and one that will be able to provide you with the business application that you consider as essential in running your business, you might want to get the iPhone 3G.

## Tips on Getting Wallpapers Inside your iPhone

Bored with how technical and standardized your iPhone is? Put some life to it. Add glimmer to the background or set really cool wallpapers to tease your eyes. You can do this in 3 easy steps. After that, you can enjoy any kind of wallpaper that your heart desires – animals, cartoons, movie logos, artists, nature and the list goes on. If you are having difficulties in managing your wallpaper and don't have a clue on how to set things your way, then give a minute of your time to ponder on these steps. The choice of wallpaper will always be based on your preference.

Step 1 - Find a wallpaper source.

This wouldn't be tough. You can surf through the internet or individually take it from your phone's memory. Once you have found the wallpaper of your dream, save it to your PC or Mac through your web browser. How do you go about this?

1. Right click on the picture or wallpaper that you like. Click on the icon that says "Save" which you will find on the right corner of the image chosen. Automatically, the wallpaper will be saved inside your device's hard drive. Usually, it depends on the settings of your browser on how the image will be saved to a location or prompt the file without minding the default.
2. If you are a Mac user, you can choose to save the wallpaper to a certain

folder or add it up to the photo library. If you are a PC user, you can save it in a folder preference or direct it to the folder which states “My Pictures”.

3. You can do the syncing in iPhoto, on a Mac, or even Photoshop and similar elements. You can also sync any kind of folder that contains the desired image.

Step 2 – Connect.

Next, you have to connect your phone to your computer. To do this, launch iTunes and then click on the tab indicating “Photos” then select “Sync from”. Based on the menu which popped-up, you are to do one of the following: choose iPhotos for Mac users or Photoshop for PC users. Choose a certain folder. Choose the “selected folders” or “albums” or “all photos” that you wanted to sync.

Step 3 – No sweat

After the endless saving and choosing of different apparent options, you are now on your final stage of your journey. Click on the icon “Photos”. By browsing through the different albums, pictures and camera roll, you’ll be able to find the picture that you want. Select that particular picture so it will be displayed in a larger size or full screen. Click on the icon that is found at the lower corner of the window. Don’t see the icon? Tap on the picture once in order to display the desired menus. Select the icon saying “select as wallpaper” then set it.

You can do the process all over again if you think that you want to change

your wallpaper. This process also applies in iPod touch although there are certain situations which you will encounter that is not very similar to that of doing it to an iPhone.

This kind of customizing will give you more edge and adhere to expressing how your iPhone should be like. Don't settle with the conventional type. Be different.

## Unlocking the 3g iPhone

iPhone 2.0's official carrier is AT&T. However, not all individuals are satisfied with AT&T or they simply want to choose the same carrier that their family and friends are using. That is no longer a problem because the 3g iPhone can now be unlocked. By unlocking the iPhone, you're free to choose the carrier.

There are lots of carriers all over the world aside from AT&T. Once your iPhone is unlocked, you can keep using the AT&T network or you can use other carriers like Verizon, T-Mobile, Vodafone, Fido, Telefonica, Tracfone O2, Tim, Rogers, DiGi, Oi, Swisscom, Cellone, Telenor, Si Mobile, Cellcom, Starhub, Optimus, MoviStar, etc.

The reason why a lot of iPhone 2.0 users want to unlock their iPhone is because they want to avoid the 2-year expensive contracts, overpriced plans, outrageous and hidden fees, and the roaming charges.

Another advantage of unlocking the 3g iPhone is that you can run whatever app you like. This will give you the opportunity to choose third party apps and even patches. In doing so, you don't have to stick with the App Store of Apple when getting new apps. Unlocked iPhones will allow the users to personalize their gadgets according to their personal tastes. They can also access free apps and other special ringtones.

If you have plans of reselling your iPhone, unlocking it is a very good idea because it increases the value by \$200. Unlocked iPhones are more expensive than locked ones. Check out the various online stores and you will find out.

iPhone users who love playing retro games such as Mario Brothers, Pacman, Sonic, and classic games will benefit a lot from unlocked iPhones. Some people are not very good in following strict rules and Apple does have strict rules regarding proper iPhone use. If you're not that kind of person, then unlocking your iPhone will do you good.

The decision is up to the owner whether he or she will unlock the iPhone or not. There are advantages as well as disadvantages. If you think that the advantages of unlocking iPhones outweigh that of simply sticking to a locked iPhone, then you may proceed. The unlocking process takes just a few minutes and after that, you can already enjoy downloading new ringtones and apps outside the App Store.

Unlocking a 3g iPhone is not really hard and in fact, you can even do it on your own. There are lots of instruction resources online that you can find about iPhone unlocking. Find the resources and you can carry out the task in minutes. Still, if you're not that good in handling gadgets like the iPhone, it would be best to have somebody do it for you; someone who is experienced in unlocking iPhones, particularly iPhone 2.0.

If you have your own preference when it comes to carriers and GSM networks, hurry and unlock your iPhone now. You're not alone in the world. In fact, more and more iPhone users want to unlock their iPhones to enjoy unlimited access to third party apps.

There are times when iPhone owners don't like the new apps released by Apple or they don't find the new apps functional, may be because it doesn't suit them. If this is the case, no harm can be done if you unlock the iPhone. Remember, if you can't do it on your own, have a professional do it for you.

## Watching YouTube iPhone Style

Love watching YouTube? If you are that type of person whose day is not complete without watching videos streamed from the site, then lend a moment of your time because this can be very crucial for your YouTube watching life. Of course, this would be very much advantageous if you have an iPhone at hand otherwise this article is not for you. You can do more with your phone at hand – endless video streaming of the beautiful, the ugly, the gross, and the funny. Best thing is, you can upload videos! Give thanks to Apple and its iPhone venture because you, and the millions who makes YouTube a habit, can now enjoy watching all sorts of videos from YouTube 24/7.

It is said that Apple made its mark when it has sold a device capable of doing a lot of things being incorporated to it. And one of which is watching YouTube directly from the phone's screen. This innovation has allowed owners of the phone to watch from millions of library entries with streams of new ones being uploaded daily. The great thing about it is that users can explore any kind of videos which goes from old to new ones without being in the fuss of learning a different search procedure. Compared to EDGE, the quality of video is undeniably much better.

Here are the steps:

1. From your phone, you'll be seeing an icon which states "YouTube",

select it. The icon can be easily recognized because it looks like a small television screen on your window. If you select this icon, it will direct you to the main page of YouTube.

2. The moment you're inside the YouTube main page, click on the "Search" button in order to start your search. Remember, to touch the keys for YouTube keywords lightly in order to prevent common mistakes made by other users. You have to make contact with the field of keyword or else, your typing efforts will be worth nothing.

3. When typing keywords, you can choose to either keying in broad or specific keywords in order to find videos within the site. Because of the phone's keypad that is made virtual, typing in keywords is simpler in order for you to locate the videos of your choice.

4. When you are on the page indicating "Search results", look for the icon saying "Video" then highlight it. In order to access the selected video, by using your index finger, press the icon downward. If there are any information that accompanies the video, it will be stated and displayed.

5. For the quick play options to begin, tap on the "Play" icon. It is centered at the bottom part of the screen. To go directly to the chosen video, you can prefer to skip viewing options. In order to access phone and YouTube tools, touch the space located outside the main screen. You will see tools like fast forward or rewind which will allow you to watch your preferred video at your pace. You will also see a sliding bar that will let you pick the part of the

video where you can go to or go back from.

6. Lastly, iPhone allows its users to create your customized icon for YouTube. You can access this feature by simply choosing “More” on top of the screen.

## **Ways to Download Music to Your iPhone And Save A Lot of Money**

Ever since people began purchasing and using the iPhone, they have been trying to figure out how to download music to their iPhone without spending too much money. Today, people are still trying to find out how and are still spending a fortune in those pay per track music download websites. If you download regularly from such websites, you might want to try computing your expenses per year on the download. You may be shocked as the total amount of money may even get you another iPhone.

So, forget about these pay per track music download websites, and forget about P2P illegal music download websites. Here are some of the best ways on how you can download music to your iPhone without spending too much money and even spending nothing at all.

The first way to download music to your iPhone is by ripping your existing CDs to MP3 format. You will see that iTunes, which is the default software for iPhone in your computer, will be able to rip audio CDs to MP3 format. This way, you will be able to have an entire album of your favorite tunes without paying for it through pay per track music download websites.

Almost every large music download websites have free music available for download. In most cases, the featured artist will have a few music tracks available for download at no cost at all. Just visit the website, such as the

iTunes store, frequently in order for you to take advantage of this great offer. Although you won't get the entire album of the featured artist for free, you will be able to get a couple of the featured songs at no cost at all.

Some large music download websites offer freebies for new members. Try registering in music download websites that offer this kind of promo. However, make sure that you don't purchase a monthly subscription as this will make your credit card bill go sky high.

If nothing else is available, you should try looking for websites that offer unlimited music downloads for a one time annual fee. With websites like this, you will be able to download your favorite music that your heart desires. And, the best thing about this is that you will only pay a one time annual subscription fee. After paying it, you will now be able to freely download whatever music you want for the entire year without spending another penny.

For example, if the annual subscription fee is at 20 dollars and you are allowed to make unlimited downloads you will see that this will be very cheap compared to pay per track music download websites.

These are the ways on how you can download music to your iPhone at a minimal or no cost at all. Remember these tips and you can be sure that you will be able to enjoy listening to your favorite music with your iPhone without spending a fortune for it.

Don't download from illegal P2P websites as this is a dangerous way to obtain music. It may get you the music you want for free, but it has its risk. Not only that you may get in to trouble with the law, but it will also mean that you are risking your computer in getting infected with computer viruses and spyware software.

## Web Browsing the iPhone Way

For those who have no idea on the HOWs of dealing with an iPhone based on its web surfing features, here are some tips on easy manipulation of your device and ways on dealing with your phone without having to worry about being stuck in an uncompromising situation with your iPhone.

### Tip 1 – Make commands easier

How? Get a keyboard that's bigger than the usual feature. It goes with the practical reason that if you can't manipulate something because it just doesn't go with how you want it to be, then, improvise. If you think the device is already giving you a hard time to work things out with it, try getting something that'll suit your preference. Just by tapping through Safari's address bar, it summons a keyboard that's on-screen. Once you rotate the device in a horizontal manner, the Safari will likewise be rotated in a horizontal manner. The important thing is that, Safari has a more standardized feature which will make data entry a breeze.

### Tip 2 – Home page creation

If you are using your Safari in its typical version which runs through your Macintosh, home page set-up is much easier. You can't do this directly on your phone, although you can make your way through by adding your

personal home page to the list of your bookmarks then move it at the list, preferably on top. This may require an extra tap but then again, you can get your chosen web page without having to go around twists and turn and achieving nothing.

### Tip 3 – URL sharing

Want to send the URL of a page that you are viewing in the web to a friend? Try tapping the address bar then choose “Share”. An e-mail message, a new one, will be sent that’ll contain the address being opened in “Mail”. Be careful to choose recipients, adding your comments and then tapping on “Send”.

### Tip 4 – Making that Safari call

There will come a time that you’ll find a number inside Safari that you’ll be interested to call, you don’ need to go to the fuss of jumping to a phone component. You can do this by tapping on the number and let the phone dial it for your sake. This will work with URLs and phone numbers which are embedded in e-mails. Respectively, tapping will either open a whole web page or make a call.

### Tip 5 – Investigate different links

In order to summon the information balloon in Safari, you have to hold your fingertip downward on a particular link instead of a tap. In this way, the

balloon will display the underlying URL. This also happens when you hold a particular link in “Mail”. On the arrival of e-mails addressing updates on your accounts, just press and hold on that link in order to find out if you’ll be taken to the site that the e-mail has indicated you to.

Tip 6 – Start from the top

Upon encountering a web page that has a long view, and you suddenly decided on getting back to Safari, you need not scroll to the top. What you can do is to try tapping on the gray status bar which can be seen on top of the iPhone’s monitor. Immediately, you will be transported to the web page you are currently browsing.
